International Journal of Microwave and Millimeter-Wave Computer-Aided Engineering

Contents

VOLUME 2, 1992

Issue 1, January 1992

Editorial, 1–3
K. C. Gupta

Accurate Calculation Method for the Capacitance of Generalized Circular Structures, 4–11
Faton Tefiku and Eikichi Yamashita

Yield Sensitivity Study of A1GaAs/GaAs High Electron Mobility Transistor, 12–27
Jogendra C. Sarkar and John E. Purviance

Design Concepts of a Novel Microwave Active Filter, 28–33
M. R. Moazzam and A. H. Aghvami

CAD Models for Microstrip on Iso/Anisotropic Substrates and Their Application to Transient Analysis, 34–39
Protap Pramanick and Prakash Bhartia

Capacitance of Microstrip Lines on Anisotropic Substrate Using the Method of Lines and Finite Elements, 40–48
Zhiqiang Wu and Marat Davidovitz

Large-Signal Modeling and Simulation of GaAs-MESFETs and HFETs, 49–60
Hardy Sledzik and Ingo Wolff

MIC Simulation Column, 61–65
Coordinated by Inder J. Bahl

Call for Papers: Special Issue on Modeling of MESFETs and HEMTs for Microwave CAD, 66

Issue 2, April 1992

Editorial, 67–69
K. C. Gupta

Direct Synthesis of Distributed Lossless Networks with Application to Microwave Amplifier Design, 70–81
N. Julien and J. C. Mollier

Singular Value Decomposition Improves Accuracy and Reliability of T-Septum Waveguide Field-Matching Analysis, 82–89
Vladimir A. Labay and Jens Bornemann

Two-Dimensional Field Analysis for CAD of Rotman-Type Beam-Forming Lenses, 90–97
P. C. Sharma, K. C. Gupta, C. M. Tsai, J. D. Bruce, and R. Presnell

Faster Computation of Z-Matrices for Triangular Segments in Planar Circuits, 98–107
Sung Hwan Lee, A. Benalla, and K. C. Gupta

Nonlinear Transient Analysis of Coupled RLGC Lines by the Method of Characteristics, 108–115
N. Orhanovic and V. K. Tripathi

MIC Simulation Column, 116–130
Coordinated by Inder J. Bahl

Book Review Column Announcement, 131

Call for Papers: Special Issue on Modeling of MESFETs and HEMTs for Microwave CAD, 132

Issue 3, July 1992

Editorial, 133–134
K. C. Gupta

An Accurate De-Embedding Procedure for Characterizing Discontinuities, 135–143
Tapan K. Sarkar, Zoran A. Maricevic, and Masoud Kahrizi

Closed-Form Expressions for Computer-Aided Design of Microstrip Ring Antennas, 144–154
I. J. Bahl and S. S. Stuchly

Conductor Loss on Transmission Lines in Monolithic Microwave and Millimeter-Wave Integrated Circuits, 155–167
Wolfgang Heinrich

Analysis of Arbitrarily Shaped Microstrip Patch Antennas Using the Sommerfeld Formulation, 168–178
Tapan K. Sarkar, Pallab Midya, Zoran A. Maricevic, Masoud Kahrizi, Sadasiva M. Rao, and Antonije R. Djordjevic

Synthesis of Marchand Baluns Using Multilayer Microstrip Structures, 179–188
Charles L. Goldsmith, Anthony Kikel, and Nancy L. Wilkens

Transient Analysis and Simulation of Nonuniform Lossy Transmission Lines, 189–202
Wojciech Bandurski

MIC Simulation Column, 203–206
Coordinated by Inder J. Bahl

Book Review Column, 207–208
Coordinated by Ingo Wolff

Book Review Column Announcement, 208

Call for Papers: Special Issue on Modeling of MESFETs and HEMTs for Microwave CAD, 209

Call for Papers: Special Issue on CAD of Printed Antennas and Arrays, 210

Announcement: Special Issue on Microwave and Millimeter-Wave CAE in Japan, 211

Editorial Board 1990–1992, 212–220

Issue 4, October 1992

Special Issue:
Electromagnetic Simulation of
Planar Microwave and Millimeter-Wave Circuits

Editorial, 221
K. C. Gupta

Guest Editorial, 222–223
Fred Gardiol

Full-Wave Spectral-Domain Analysis for Open Microstrip Discontinuities of Arbitrary Shape Including Radiation and Surface-Wave Losses (Invited Paper), 224–240
Tzyy-Sheng Horng, Nicolaos G. Alexopoulos, Shih-Chang Wu, and Hung-Yu Yang

Analysis of Discontinuities in a Grounded Slab Waveguide by Combination of Finite-Element and Boundary-Element Methods, 241–247
Koichi Hirayama and Masanori Koshiba

Application of Singular Value Decomposition for Integral Equation Procedures in MIMICAD, 248–252
Michael A. Thorburn and Vijai K. Tripathi

An Efficient Scheme for Simulating Large, Passive Microstrip Layouts, 253–260
Doris I. Wu

Numerical Modeling of Crossover and Other Junction Discontinuities in Two-Layer Microstrip Circuits, 261–272
Ahmad Hoorfar, J. X. Zheng, and David C. Chang

Printed Radiating Structures and Transitions in Multilayered Substrates, 273–285
Lionel Barlatey, Hugh Smith, and Juan Mosig

Three-Dimensional Electromagnetic Analysis of Shielded Microstrip Circuits, 286–296
A. Hill, J. Burke, and K. Kottapalli

Theoretical and Experimental Investigation of Passive Components Realized in Suspended Stripline Technology, 297–313
Joseph Achkar, Odile Picon, Victor Fouad Hanna, and Jacques Citerne

A Hybrid-Mode Boundary Integral Equation Method for Normal- and Superconducting Transmission Lines of Arbitrary Cross-Section, 314–330
Werner Schroeder and Ingo Wolff

A Comparative Study between Shielded and Open Coplanar Waveguide Discontinuities, 331–341
N. I. Dib, W. P. Harokopus, Jr., G. E. Ponchak, and L. P. B. Katehi

MIC Simulation Column, 342
Coordinated by Inder J. Bahl

Book Review Column, 343–345
Coordinated by Ingo Wolff

Book Review Column Announcement, 345

Call for Papers: Special Issue on CAD of Printed Antennas and Arrays, 347

Index to Volume 2, 349

Announcement: Special Issue on Microwave and Millimeter-Wave CAE in Japan, 359
